Common RPC Errors

Error: Maximum number of retries (2) exceeded while executing database operations with 'UtopiaExecutionStrategy'. See inner exception for the most recent failure. The underlying provider failed on Open. **53300: sorry, too many clients already**

Solution: By default the number of connections that a postgresql db can have is 100 and they are hitting that thresh hold. Increasing the max number of connections allowed should resolve this. [this](#) article details how to do this.

Other Details: We've seen this happen when using Pangea to export from RPC to windows.
