

Wi-Fi Information (Revver and Auditorium Wifi)

Revver Internal Wi-Fi

Our main Wi-Fi SSID is "Revver"

This is our internal network and what every employee computer should be using (unless plugged into Ethernet). This SSID will be added to your computer automatically when you first set it up. The password for this is not shared. If your computer is not connected to this SSID you should contact IT.

Revver Personal Wi-Fi

The SSID for this is "**Revver-Personal**"

The password for this SSID is: **revverbyod**

This is the SSID you should use for personal devices such as a smartphone or personal computer. It can also be used for testing purposes if you need to test something off the main network. This SSID does not connect to our main network. The password for this SSID should NOT be given out to guests

Revver Guest

The SSID for this is "Revver-Guest"

There is no password for this SSID.

This SSID is for guests who come to Revver and temporarily need access. Once they connect to this SSID they will be prompted to enter the email of a Revver employee. That employee will then be responsible for approving the Internet activity for that guest.

Auditorium Wi-Fi

The auditorium can be connected via

Auditorium Guest WiFi1

Auditorium Guest WiFi2

Both of these SSIDs require no password to connect but you will need to verify with a valid phone number to connect. Also, the first time you connect, it may ask you to install software in order for you to connect.

(This is the old auditorium SSID and password

SSID: Auditorium Guest Wifi

Password: GuestAccess2021)
