

Setup

Setting Up w/ Visual Studio

[Install and manage GitHub Copilot in Visual Studio - Visual Studio \(Windows\) | Microsoft Learn](#)

Setting Up w/ Visual Studio Code

[Set up GitHub Copilot \(visualstudio.com\)](#)

You will also probably want to install the GitHub Copilot Chat extension. [Setup Docs here](#)

Assigning Licenses

Use the following screenshot for guidance on where to assign licenses, just also make sure you have the RevverDocs organization selected or you may not see the view shown in this screenshot.

The screenshot shows the GitHub Copilot Business settings page for the RevverDocs organization. The page is divided into several sections:

- General:** Shows the organization name (RevverDocs) and a link to switch settings context.
- Access:** A sidebar menu with options like Billing and plans, Repository roles, Member privileges, Import/Export, and Moderation.
- GitHub Copilot Business:** The main content area, which includes:
 - Copilot seats:** 2 seats. A note indicates the number of purchased seats and provides a link to learn more about licenses.
 - Estimated monthly cost:** \$38.00. A note indicates the cost per seat (\$19 USD/month) and provides a link to review billing details.
 - Copilot Business is active in your organization:** A section with a warning icon and text explaining that Copilot Business is active and providing instructions on how to control access.
 - Access management:** A section with a search bar and a list of members with access to Copilot. The list shows 2 members: @quinndgodfrey and @j0shblotter, both with last usage 17 hours ago.
- Buttons:** A "Get report" button and a green "+ Add seats" button are visible at the bottom right of the main content area.
