

Builds w/ Client Id and Secret we can hand to customers

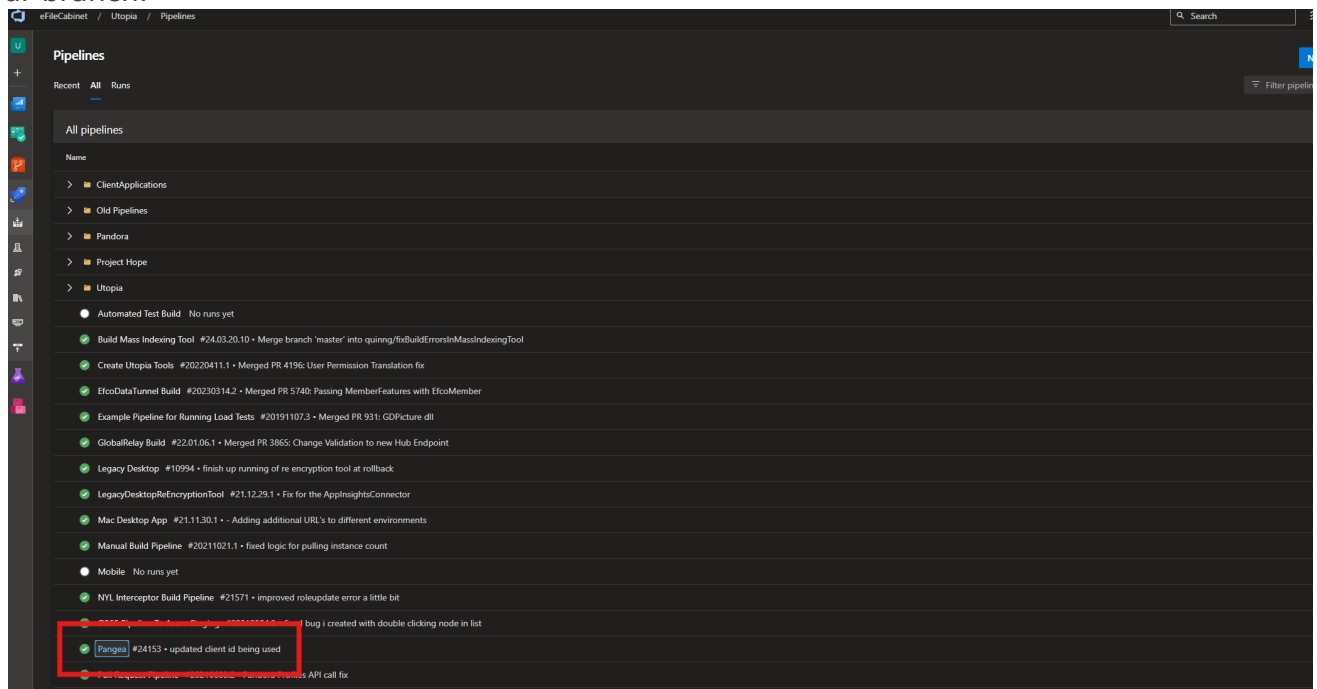

1. If needed, Ops team needs to add a new client application and you need to get the client id and secret to use from them. It should have the following data (may need to be updated in the future). Existing ids and secrets can be found in the Last Pass Note named '**Extra Pangea Clients**'. If a new one is created, add it to this last past note.
 - Name: Revver Migration Tool
 - Website: <https://www.revverdocs.com>
 - Description: Migration tool to copy account data from one Revver platform to another.
 - Organization: Revver
 - IsEnabled: true
 - AcceptedTermsOfUse: true
 - AllowRefreshToken: true
2. In source code, on a branch off of master, in the **Utopia.Api.UtopiaApiConfiguration** file, update the **ApplicationId** and **UtopiaSecret** properties for the **Revver** configuration with the new client id and secret.

```

1  using System;
2  using System.Configuration;
3  using System.Linq;
4  using Utopia.Enums;
5
6  namespace Utopia.Api
7  {

50         }
51
52         private string _url;
53     }
54 }

```

3. Commit and push your changes to the repo so you can do a **Pangea** build in ADO off of your branch.

4. Once the build is complete download the **Zipped Folder Package / efilecabinet Migration Tool.zip** artifact.
