## testSettings.json

To change the URL endpoint to be tested:

Go to testSettings.json

Lines 10 through 19 include all of the endpoints

Uncomment line 19: storageType : 1 - this will use cloud storage

Comment out line 13, if needed. storageType: 0 - this is used only for local storage when running locally

Uncomment the line with the desired endpoint - "targetUrl": "https:// . . ."

Comment out the lines with the other endpoints

## Adjusting Runtime Parameters

### Timeout

In testSettings.json Line 33 is "timeoutInSec" : nn - We have found that running a timeout of 45 seconds works best

### Parallel Threads

Constants.cs Line 12 - MaxThreadCount = n Set this value to 1, 2, or 3. In many cases, a value of '2' works best.

### Headless Mode

Line 13 - HEADLESS\_MODE = true/false true for headless mode - the tests will run faster false for non-headless mode - the tests run a bit slower but you can watch the execution
